

Abhishek Kumar T

Aspiring Full-Stack Developer | Python | Flask | SQL | Machine Learning
abhishek8123416980@gmail.com | linkedin.com/in/abhisheksharma611 | github.com/abhisheksharma611

PROFESSIONAL SUMMARY

Aspiring Full-Stack Developer and Computer Science Engineering student with hands-on project experience building web applications using Python, Flask, SQL, and JavaScript. Built an AI-powered email threat detection system using a fine-tuned RoBERTa model and an ML ensemble. Skilled in object-oriented programming, data structures, and creating responsive frontends with HTML, CSS, and JavaScript. Comfortable writing clean, maintainable code and applying OOP and DSA fundamentals to solve real-world problems. Continuously learning backend development, machine learning, and system design to grow into a software engineering role.

SKILLS

- Languages: Python, Java, SQL, JavaScript, HTML5, CSS3
- Backend: Flask, MySQL (basic)
- Machine Learning: RoBERTa (Transformers), scikit-learn, TF-IDF, PyTorch
- Frontend: Responsive Web Design, Vanilla JavaScript
- Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, Inheritance
- Developer Tools: Git, GitHub, VS Code, OpenCode
- APIs & Integration: OAuth 2.0, Gmail API, NVIDIA NIM

PROJECTS

Expense Tracker | [Project Link](#)

Python (OOP) · Git · OpenCode · VS Code · Classes & Objects · Data Structures

- Built a budget management application using a Category class to track deposits, withdrawals, and transfers between categories.
- Implemented a transaction ledger and a percentage-based spending chart for clear category-wise visualization.
- Applied OOP principles: classes, methods, encapsulation, and formatted console output.

Polygon Area Calculator | [Project Link](#)

Python (OOP) · Git · OpenCode · VS Code · Inheritance · Method Overriding

- Developed a geometry toolkit with Rectangle and Square (inherited) classes computing area, perimeter, and diagonal.
- Added ASCII shape rendering and shape-fitting logic via method overriding across a 2-class inheritance model.
- Practiced inheritance, method overriding, and math-formula implementation in a structured class design.

AI-Powered Email Spam Detection and Threat Analysis

Python · Flask · RoBERTa/Transformers · scikit-learn · PyTorch · Google OAuth 2.0 · Gmail API · NVIDIA NIM · HTML/CSS/JS · Bootstrap

- College Project – Mini completed, Major ongoing (Phase 2/3).
- Built a Flask web app integrating Gmail via Google OAuth 2.0 to fetch and classify inbox emails into 6 categories (spam, phishing, malware, promotion, newsletter, legitimate).
- Fine-tuned a RoBERTa transformer with a 5-model scikit-learn ensemble (VotingClassifier); an orchestrator (90% RoBERTa + 10% ensemble) reached 95.84% test accuracy (RoBERTa 95.67%, ensemble 93.5%).
- Added an AI explanation layer using NVIDIA NIM that generates plain-language reasons per classification, plus adaptive keyword learning and sender-reputation tracking.
- Implemented 0-100 risk scoring, regex urgency detection, HTML/XSS sanitization, and a responsive dashboard with Chart.js analytics.

EDUCATION

Bachelor of Engineering in Computer Science and Engineering 2023 – 2027

Cauvery Institute of Technology, Mandya | CGPA: 8.01 / 10

Pre-University Course (PUC) 2023

Govt PU College, Chinakurali | Score: 67.3%

Secondary School Leaving Certificate (SSLC) 2021

BGS Vidyalaya, Chinakurali | Score: 85.6%

CERTIFICATIONS

- 5-Day AI Agents: Intensive Vibe Coding Course – Kaggle | Jul 2026
- AI Fundamentals: Foundations for Understanding AI – IBM SkillsBuild (Credly) | Jul 2026
- Lifelong Professional Skills – IBM SkillsBuild (Credly) | Jul 2026
- Introduction to AI concepts – Microsoft Learn | Jul 2026
- Introduction to Large Language Models – Google | Jun 2026
- Python (Basic) – HackerRank | Mar 2026
